

DA-16X Firmware version **2.07** Read Me

The following items are needed to load the firmware file into DA16X:

- Macintosh OSX 10.2 or higher or Windows XP computer
- USB Midi interface, compatible with the Operating System used
- ApogeeUpdater program compatible with OS used, available from Apogee's website

Equipped with these items, please follow the instructions included with this firmware.

Revision History

Version 1.34 – May 2004	Initial version; this firmware does not support Option cards.
Version 1.42 – July 2004	Support for X-HD Option card added.
Version 1.47 – July 2004	Support for both Rev. B & C Main boards; Rev C MUST have version 1.47 or higher.
Version 1.49 – Sept 2004	resolves X-HD card recognition errors.
Version 2.03 – Jan 2005	Add Advanced Option routing. This version may be used with ALL serial numbers. Resolved issue when DA16X clocked to Ext 96k source and display read 96.01kHz.
Version 2.04 – Feb. 2005	Resolved issue with Optical Ins on later hardware versions. Increased Calibration range to match AD16X.
Version 2.07 – July 2005	Required when using a version 1.67 X-HD card. Resolves S/MUX/4 issues, including an issue whereby optical format is set to S/MUX/4 when sample rate is at 88.2-96kHz.
