

September 26th, 2007

Apogee announces the availability of new firmware for the X-Series HD option card. The new firmware, Updater application and instructions are available from Apogee's web site here:

http://www.apogeedigital.com/downloads/documents.php?show=xhd_card

The following bugs have been resolved:

- In configurations where an unequal number of AD16X or DA16X interfaces are connected to an HD PCI card and set in Advanced routing, all signal paths now function as expected.
- Recognition of interfaces in larger HD systems is now significantly more consistent.

This firmware includes all features added in the X-HD firmware release of August 15th, 2007, including:

- Detection of X-HD equipped Apogee interfaces as **Digital 192** Interfaces in Pro Tools software.
- AD/DA16X Advanced routing changed.
- Latency correction values now entered in Pro Tools software **I/O Setup** pane.
Please consult the X-HD User's Guide version 2.1 for details

Apogee recommends that all X-HD users update their cards.
